## 1. Font

There are some problems with fonts. At some point, some characters are thicker than others or overlap.

(Chrome - Windows)

(IE8 - Windows)

## 2. Banner header

On IE 8, the text is white on white. On recent browsers (Chrome, Firefox, ie > 9) there is a "test-shadow" which is available with CSS3.

### 3. News Video

For news videos, the shape is above the player. So you can't click on controls buttons.  
The red area is unusable (All browsers)

### 4. Select Form

On IE8, the select form are shifted off-center. The select elements are part of the least stylisable in CSS. To avoid this problems between browsers, it would be best to leave the default style. You can change the width, this does not cause problems, but not the height or font-size.
